Introduction

It took sixty years for this office to produce our first *INDIANA FACTBOOK* in 1985. Now, in response to popular demand, we offer this edition with an interval of only four years.

Despite the opportunity for on-line access to these data through EDIN—the Economic Development Information Network—many information users want a volume of printed materials. Despite the fact that many important data series cannot be brought up-to-date until after the 1990 Census, we have received numerous requests for a new edition of the *INDIANA FACTBOOK*.

In response to this public outcry, these earnest entreaties, we present the *INDIANA FACTBOOK 1989* . . . a work that is truly "Back by Popular Demand."

This new edition is not a simple up-date of the 1985 edition. If there were no new data (as is the case, for example, with the poverty status of the population and virtually all of the housing data), then that section is not present in this edition. All of the data contained in these pages are new since the last edition; if there is repetition it has been only to put new data into historical perspective.

Readers find many totally new data series here (for example, gross state product and income and employment projections) and several intriguing new features. The first section again indicates Indiana's position in the context of the nation. But it has been expanded and modified to include the four states which have the honor of bordering the Hoosier state. Hence, we can see ourselves and be seen, not only in national terms, but in regional perspective as well.

The second section provides data on each of Indiana's 92 counties. Often important rankings and computations have been performed to give added utility to the data and to stimulate analysis. Data on cities, townships, school corporations, and other units are rarely available and are not included. The third section, county profiles, has been deleted in contemplation of an entirely different publication which is now in the planning stage.

This Factbook has been made possible by the dedicated efforts of a few exceptionally conscientious people, by the existence of a remarkable data base, and by the generous support of a fine organization.

The organization is the Indiana University School of Business which has underwritten the costs of assembling and producing this work. Dean Jack Wentworth and Associate Dean George Hettenhouse have provided the encouragement and support without which no project of this magnitude can be initiated nor sustained. In good entrepreneurial fashion, they provided the seed capital at a time when the endeavor was a speculative venture. We are, literally, in their debt.

The data base is EDIN—the Economic Development Information Network—funded by the State of Indiana with guidance by the Indiana Economic Development Council and the Indiana Higher Education Commission. This superior resource is a collaborative effort of many dedicated colleagues in the Indiana Business Research Center. To mention any of their names entails the risk of omitting some, but we need to note: Lowell McCoskey who has designed successive versions of an on-line system that commands national attention. Carol Rogers who manages and shapes the network with energy and imagination unsurpassed. Robert Plummer who has programmed components of the access and maintenance elements of the system for those of us who have minimal computer literacy. Linda Kutche, Vicki Nelson, Sharon Boylan, and MaryBelle Davis who, with care and diligence, shepard the data into electronic corrals.

That is the setting in which this Factbook was produced by three people. Terry Creeth took personal responsibility for this effort and made it a personal achievement. Each page has been crafted by her imagination and knowledge as the Data Base Manager of the Center. Each column and row has occupied her nightmares for months. No detail has been beyond her consideration. Yet she has persisted without developing that particular paranoia which characterizes the obsessed.

Perhaps Terry's sustained sanity is the result of her wonderful collaboration with Cristie Kellar and Krista Perman. Cristie put together each page, created each of the many graphics, designed each element of each map. The handsome appearance of the data is the result of Cristie's well-applied skill and great patience. Krista bore the burdens of verification. None who have not walked in that path can know the weight and pressures of those burdens. Those who know Krista know the good-spirited dedication with which those burdens were borne.

To put this volume in your hands required the continuing effective attention of Jo Clontz working with Jeri Rogers, Melva Needham and Dorothy Fraker. John Thomas of Fast Stats gave particularly valuable assistance in the transformation from prototype to final reality.

We know that there are errors unintentionally remaining in this work. In the 1985 edition there were seven mistakes. We will be delighted if that record can be equalled. Our readers will honor us if they will point out these mistakes. The eighth caller (with a new message) will not, however, be given a prize.

Beyond all the words commending those who made this volume a reality, we dedicate this work to the thousands of good people in the statistical agencies of the state and federal government. Their daily activities, collecting and organizing the numbers which reflect our lives , are precious contributions to sustaining a free and vigorous society. In the spirit of their labors, we offer this volume for those who would know Indiana better.

Explanatory Notes

HOUSEHOLD: A household includes all the persons who occupy a housing unit.

PER CAPITA INCOME: The average income for every individual (man, woman, and child) in any particular location.

MONEY INCOME: The Bureau of the Census uses a "money income" concept as the basis for its per capita income estimate. Money income is the sum of all sources of cash income including wages and salaries, income earned through self employment and farming, interest, dividends, and rental income, social security payments, disability payments, pensions, alimony and child support, winnings from gambling, and other cash income sources. Excluded from the total are funds received through the sale of property (unless it is a business), medicare reimbursements, the value of food stamps, public housing subsidies, employer contributions for pensions, borrowed money, money withdrawn from savings, tax returns, and so on.

PER CAPITA MONEY INCOME: The total money income for all persons within a geographic location is divided by the total number of persons in that location to produce a per capita income estimate. In order to be consistent with the decennial census, the Census Bureau compiles income estimates for the prior calendar year and divides by the present year's estimated mid-year population.

PERSONAL INCOME: The Bureau of Economic Analysis (BEA) uses a total "personal income" concept which includes most of the same sources of cash income including transfer payments (e.g. social security, unemployment compensation, and welfare payments) along with the imputed value of non-monetary income or benefits received by household members. This is the key difference between the Census and BEA income figures. The BEA concept includes the monetary value of food stamps, medicare, medicaid, and public housing subsidies, as well as the cash value of employers contributions to employee welfare and pension funds. In most cases, the imputed value of this non-cash income adds up to several thousand dollars, and as Census Bureau research has shown ("Technical Paper, 50" and "Technical Paper 55," 1985), the inclusion of non-cash benefits has a substantial impact on defining the size and composition of the population in poverty.

PER CAPITA PERSONAL INCOME: Income estimates (based mainly on administrative records such as the Labor Department's ES-202 files) for any given year are divided by the mid-year population estimate for the same year in order to derive per capita income estimates.

Thanks to the Michigan State Data Center for the above explanation of the difference between the Census Bureau's and the Bureau of Economic Analysis' income data.

FOOTNOTE:

Tax due on sales including allocation includes unidentifiable sites, true out of state collections, and non-compliance. County figures do not sum to state totals because state figures include sales and tax remitted from out of state corporations doing business in Indiana
